

FIFO Compliance Statement

In accordance with **NFA Rule 2-43b**, **Triempetus EA Software** complies with the **FIFO (First In, First Out) rule** when executing trades on U.S.-regulated accounts. This rule is mandatory for all retail forex traders operating under NFA oversight and ensures that the earliest opened position in a particular currency pair must be closed first before newer trades can be exited.

FIFO Requirements in Forex Trading

The core requirements of FIFO include:

- **Sequential Trade Closure:** Traders must close positions in the same currency pair in the order they were opened (i.e., oldest positions closed first).
- **No Hedging Allowed:** Opposing positions in the same pair (i.e., long and short trades at the same time) are not permitted under FIFO. All trades must be managed without hedge stacking.
- **Consistent Position Management:** Trade modifications, such as partial close or stop loss changes, must respect the FIFO structure and cannot manipulate execution order to circumvent compliance.

No Hedge Fund or Hedging Strategies

Triempetus EA does not engage in or support hedge fund strategies, nor does it execute **hedging techniques** in violation of the FIFO rule. The system is built to operate transparently and in full alignment with regulatory standards for U.S.-based forex trading accounts.

Why This Matters

By enforcing FIFO compliance, Triempetus EA protects traders from regulatory breaches while maintaining integrity and accountability in trade management. Subscribers using NFA-regulated brokers can operate with confidence, knowing that every trade respects FIFO standards.
